

Diana Laird is a Professor at University of California San Francisco in the Department of Obstetrics, Gynecology and Reproductive Science and the Institute for Regeneration Medicine. She directs the Laboratory of Germline Development, Fitness, and Aging. Her basic research program is motivated by solving infertility, reproductive aging, and understanding the effects of prenatal exposures to endocrine-disrupting chemicals and psychosocial stressors. She is involved in the intersection between science and society as deputy director of the UCSF P30 EaRTH Center (Environmental Research and Translation for Health). After a bachelor's degree in Physics from Harvard, she entered stem cell biology as a PhD student at Stanford in the lab of Irving Weissman. She trained as a postdoc in developmental genetics with Kathryn Anderson at Sloan Kettering Institute. Her research has been recognized by an NIH New Innovator Award (DP2), an award from the W.M. Keck Foundation for Biomedical Research and she was recently appointed as a Chan Zuckerberg Biohub Investigator.
